

Class 7 Science - Chapter 1: The Ever-Evolving World of Science

Topic: 1.2 Observation, Hypothesis, Experiment - 50 MCQs

1. Observation in science means carefully _____ things around us.
 - A. ignoring
 - B. studying
 - C. breaking
 - D. hiding
2. The first step in scientific investigation is usually _____.
 - A. celebration
 - B. observation
 - C. drawing
 - D. sleeping
3. A possible explanation for an observation is called a _____.
 - A. conclusion
 - B. hypothesis
 - C. result
 - D. law
4. Testing a hypothesis is done by conducting an _____.
 - A. accident
 - B. experiment
 - C. game
 - D. story
5. Which sense organ helps most in visual observation?
 - A. Ear
 - B. Eye
 - C. Nose
 - D. Tongue
6. An experiment is performed to _____.
 - A. prove or disprove a hypothesis
 - B. waste time
 - C. avoid questions
 - D. draw pictures
7. A good hypothesis should be _____.
 - A. testable
 - B. magical
 - C. impossible
 - D. random
8. Observation helps scientists to collect _____.
 - A. dreams
 - B. data
 - C. stories
 - D. guesses
9. Which of these is an example of observation?
 - A. The flower is red
 - B. Flowers are lucky
 - C. Plants like music
 - D. Rain is magic

10. If a plant bends toward sunlight, this is first noticed by _____.
A. guessing
B. observation
C. drawing
D. sleeping
11. The statement 'plants need sunlight to grow' is a _____ before testing.
A. result
B. hypothesis
C. conclusion
D. fact after proof
12. Using a ruler in an experiment helps in _____ measurement.
A. rough
B. accurate
C. careless
D. random
13. A fair experiment changes only _____ factor at a time.
A. one
B. five
C. ten
D. no
14. The result of an experiment should be based on _____.
A. evidence
B. feelings
C. luck
D. rumors
15. Which of these is NOT a step of scientific method?
A. Experiment
B. Observation
C. Rumor
D. Conclusion
16. Scientists repeat experiments to check _____.
A. accuracy
B. music
C. speed only
D. decoration
17. Writing down observations helps to avoid _____.
A. mistakes
B. fun
C. books
D. games
18. Which tool is commonly used to observe tiny organisms?
A. Microscope
B. Television
C. Fan
D. Torch
19. An experiment should be _____ so others can test it too.
A. repeatable
B. secret
C. confusing
D. imaginary
20. The conclusion of an experiment is based on _____.
A. evidence collected

- B. dreams
- C. luck
- D. stories

21. If water is heated, it evaporates faster. This can be tested by _____.
A. heating water and observing
B. drawing water
C. freezing air
D. ignoring it
22. Observation can be made using _____ senses.
A. all five
B. one only
C. two only
D. none
23. A prediction made before testing is called a _____.
A. song
B. hypothesis
C. drawing
D. picture
24. Which of these is a scientific observation?
A. The leaf is green
B. Leaves are happy
C. Plants are lucky
D. Trees talk
25. Which is more accurate in science: guessing or measuring?
A. guessing
B. measuring
C. assuming
D. imagining
26. A thermometer is used to observe _____.
A. temperature
B. taste
C. sound
D. color
27. Plants growing taller in sunlight than shade is an example studied by _____.
A. experiment
B. singing
C. guessing
D. painting
28. A hypothesis may be proved _____ after testing.
A. true or false
B. red only
C. hidden
D. magical
29. The person who performs experiments carefully is called a _____.
A. teacher
B. scientist
C. artist
D. driver
30. Collecting rainwater amount daily is an example of _____.
A. systematic observation
B. sleeping
C. guessing

D. story writing

31. Which of these helps make observations more accurate?
- A. tools
 - B. noise
 - C. luck
 - D. speed
32. A notebook used for science recording is useful for _____.
A. recording data
B. playing games
C. drawing cartoons
D. guessing
33. Changing many variables at once makes an experiment _____.
A. unfair
B. easy
C. perfect
D. funny
34. Which one is a measurable observation?
A. The table is 2 meters long
B. The table is nice
C. The table is lucky
D. The table is old
35. The purpose of comparing results is to find _____.
A. patterns
B. songs
C. stories
D. colors
36. Science depends mainly on _____ and evidence.
A. observation
B. ignore
C. hide
D. break
37. If milk turns sour in heat, the first step is to _____ it.
A. observe
B. paint
C. sell
D. throw
38. An experiment without proper steps may give _____ results.
A. wrong
B. reliable
C. colorful
D. musical
39. Which of these is a conclusion?
A. Seeds need water to grow
B. Seeds are pretty
C. Seeds are green
D. Seeds are small
40. To know if seeds need water, we should _____.
A. grow one with water and one without
B. draw a seed
C. hide the seed
D. sing to the seed

41. Observation should be _____ and not based on personal opinion.
- A. objective
 - B. personal
 - C. random
 - D. funny
42. A magnifying glass helps in better _____.
- A. observation
 - B. sleeping
 - C. hearing music
 - D. cooking
43. Which of these is an example of hypothesis?
- A. If plants get sunlight, they grow better
 - B. Plants are beautiful
 - C. Flowers are colorful
 - D. Trees are tall
44. Repeating an experiment increases _____.
- A. reliability
 - B. confusion
 - C. mistakes
 - D. silence
45. Which skill is most important before forming a hypothesis?
- A. observation
 - B. sleeping
 - C. forgetting
 - D. guessing
46. Data collected in an experiment should be _____.
- A. organized
 - B. lost
 - C. hidden
 - D. ignored
47. An experiment helps us understand _____.
- A. natural events
 - B. dreams only
 - C. magic only
 - D. stories only
48. The final answer after testing is called the _____.
- A. conclusion
 - B. song
 - C. picture
 - D. holiday
49. Which is the best example of careful observation?
- A. Watching an ant carry food
 - B. Guessing ant age
 - C. Naming it lucky
 - D. Ignoring it
50. Science grows through observation, hypothesis, and _____.
- A. experiment
 - B. vacation
 - C. music
 - D. silence
